A fantastic tool for improving audio Aberdeen Proving Ground. While deployed at Aberdeen Proving Ground, Virginia, 1943-1946, Joseph William Beam was involved in supporting combat operations during World War II. Beam's work was primarily concerned with transporting and unloading supplies and building roads. He began to take an interest in music when he came to the conclusion that live music was needed at local social events. He taught himself how to play the guitar and began to perform with the group, the Welchmen. In addition to his musical abilities, Beam had the gift of perception, and he studied music by attending seminars at West Virginia State College. In the 1940s, several major changes took place in the world of music. For one, electronic technology was introduced in the 1940s. Also, during the time of the Second World War, radio stations started to offer a variety of musical genres, which in turn contributed to the popularity of the genre. Despite the huge impact that World War II had on the development of music, the Western song, along with any form of music, did not change at all. In fact, it is unlikely that there was any change at all, and certainly not any that can be considered a major change. It is impossible to say exactly what caused the decline of the Western song and the increasing trend of styles, other than that the change may have been related to the many things that were happening during the war, along with the great social and cultural changes that were taking place. Some of the reasons that might have contributed to this change might have been that the war itself was to blame, along with the massive social changes that were taking place. During the war, many people lost their jobs and were subsequently displaced. The time of the war was also highly political, with the assassination of presidents, a great depression, and the invasion of Japan and Germany. The culture of the United States had also changed, and people were using different styles of music. With the introduction of electronic technology, it became possible for people to listen to music in more ways than before. For one, electronic devices helped people stay connected and allowed them to continue listening to music even when they were away from home or places where they normally listened to it. Music Editor SpectraLayers Pro is a piece of software that allows you to edit songs in an entirely different way than you're used to. A tool for advanced users Right off the bat, SpectraLayers Pro is an application intended for those who have accumulated a certain amount of knowledge when it comes to sound waves and there's a simple explanation as to why that is. SpectraLayers Pro displays an audio sample like you hear it and instead of acting on amplitude, you manipulate frequency over time. To make things even more interesting, editing is done using brushes and the process is very similar to editing a photo in Photoshop. Just like brushing over an area to remove image noise, you can brush over portion of the spectrum and eliminate audio specific noise. Ironically, just like with Photoshop, to be able to enjoy and use the application at its full potential, without having to deal with function delay or slow performance, you do need to have an above average PC configuration. Intuitive and user-friendly interface If you're an audio engineer that has spent a couple of hours editing some photos, then SpectraLayers Pro should feel very comfortable in your hands. It displays a highly comprehensive interface which makes editing a cinch. The application enables you to create layer masks for specific areas of the spectrum in order to extract audio and edit frequency, harmonics and noise. This in turn allows you to remove any undesired sound from a recording or a song in a manner that is close to perfect. It does take a good amount of practice to learn where and how to brush, as well as how to configure the tool itself in terms hardness, frequency and time ranges. This however should come much easier once you get a handle on the '3D displace' feature. A powerful audio editing tool for those who like to focus on the details SpectraLayers Pro provides cloning and drawing tools, time and pitch manipulation, interoperability with Sound Forge Pro and a lot more. It has set the bar for spectrum editing and continues to improve the technology it uses, all the more reasons for you to give it a try and explore new possibilities. Description: Mixing your audio is nothing new. The methods of mixing are fairly well established, but why not have the edge?
