Autodesk's AutoCAD app on iPad. AutoCAD is used by architects and engineers for architectural and engineering design tasks. The current version is AutoCAD 2020, released in June 2019. Autodesk products are supported by several groups of related software and services, such as: Autodesk Navisworks, a 3D design software package Autodesk Entertainment, a home video production software package Autodesk Industrial Design, a CAD/CAM/CAE design package AutoCAD Architecture, an architectural design package AutoCAD Civil 3D, a civil engineering design package 3D Warehouse, a service that gives users access to pre-built 3D models and data Model on Demand, an online service that delivers point clouds from design tools Academy, a free online learning resource for AutoCAD Historic versions of Autodesk products (see the "Version history" link on the "Autodesk History" page) In the past, some versions of AutoCAD were sold bundled with the other software and services listed above. Many early AutoCAD users bought licenses of AutoCAD to supplement their use of a more specialized application, such as a CAD package for computer-aided manufacturing (CAM). Some of these bundled versions are available on a purchase-on-install basis in the new Autodesk License Shop. Feature overview For more information on the features offered by AutoCAD, please see the "Features" link on the "Introducing AutoCAD" page. Key concepts AutoCAD is a CAD system, which stands for Computer-Aided Design. AutoCAD is integrated with other Autodesk software, such as AutoCAD Plant 3D, AutoCAD Digital Design Edition, AutoCAD LT, and AutoCAD Architecture. These integrated products let you easily perform multi-disciplinary work. A drawing is a document in AutoCAD that defines a spatial arrangement of parts and components. A named layer is a special layer in which you can organize and group layers, objects, and data. The part browser is an AutoCAD window that lets you organize and view the contents of layers and named layers (see "Part browser overview" on the "Layered drawing overview" page). The program window is the main window of Auto

The "Update from AutoCAD LT to AutoCAD 2012" process includes not only the update of the software but also the conversion of the data stored in the files. The "Update from AutoCAD LT to AutoCAD 2010" process includes the conversion of the data stored in the files, not the update of the software. Autodesk claims that its architectural products can be used for construction. Autodesk Architectural products include AutoCAD, AutoCAD Architecture, Autodesk Civil 3D, AutoCAD Electrical, AutoCAD Mechanical, AutoCAD MEP, AutoCAD Land Surveying, AutoCAD Structural, and AutoCAD 360. Three-dimensional modeling tools The three-dimensional modeling feature in AutoCAD is based on the concept of blocks, which was used in previous versions of AutoCAD. The blocks are still available in the new AutoCAD versions. The 3D modeling tool is

available in the following releases: AutoCAD Architecture (AutoCAD ARCH) AutoCAD Civil 3D (AutoCAD Civil 3D) AutoCAD Electrical (AutoCAD ELECTR) AutoCAD Mechanical (AutoCAD MECH) AutoCAD MEP (AutoCAD MEP) AutoCAD Structural (AutoCAD STRU) AutoCAD 360 Architecture (AutoCAD 360 ARCH) An example of the 3D modeling is illustrated on the right side of the figure. This 3D model is currently available in AutoCAD 2010, but its development is being transferred to AutoCAD Architecture. Integrated modeling tools Integrated modeling tools were introduced in the Autodesk Architectural software products. It is now possible to create architectural projects from existing architectural drawings and 3D models. A unique feature of this toolset is the separation of the architectural projects into two parts: one part is the architectural design and the other part is the construction documents. The construction documents are created using a dedicated tool (e.g. Autocad 360 Architect) and the architecture design is developed using the integrated modeling tools. The integrated modeling tools include: Web-based design management Topo-converter 3D-scaping (3D pipeline) AutoCAD 360-Project (Autocad 360 Architect) Architecture modeling environment Construction documents management Autocad Architecture, Autocad Civil 3D, a1d647c40b

[Phytophagous insects and birds visiting a Mediterranean deciduous forest in Central Spain. II. Rose rosettes and other nectariferous flowers]. In order to determine the specificity of the visits of bees and other insectivorous birds to these flowers, and to study their role as sources of pollen and/or nectar, we observed the rose species growing in the lower part of the Cotos de la Sierra mountains during the flowering period from 1993 to 1995. A total of 509 rosettes, representing 24 species, were recorded (83% of the species recorded in the Cotos de la Sierra and the surroundings) and were visited by 91 species of bees and other insectivorous birds. Only about one-third of the species were recorded more than once. Half of the visits were recorded at 1-2 days after anthesis, and the rest after 3-4 days. The median number of visits was about 1, and some species were visited only once or twice. There was a low degree of overlap between the species using the flowers and the species recorded in the surroundings. The plants visited by bees and other insectivorous birds are recommended as potential sources of pollen and nectar for local and forest-dwelling pollinators, especially those included in specialist groups. It is suggested that, in addition to flowers (1) visited by pollinators (nectariferous), there are flowers (2) visited by insectivorous birds (nectariferous and/or pollinators), and flowers (3) visited by both pollinators and insectivorous birds.Trần Quốc Được Trần Quốc Được is a rural commune of Dien Hung District, Quảng Bình Province, in the North Central Coast region of Vietnam. Automatic Freehand: Freehand annotation is now fully automatic. No more re-drawing what you already did, and your drawings will become more consistent with your design intent. (video: 1:22 min.) Multi-Object Navigation (MOV): Incorporate and align 3D models to your drawings more easily. Navigate from one face of a part or assembly to the other to create an assembly. (video: 1:28 min.) Layout Panning and Navigation: No more over-simplifying layouts to get a design back on paper. Pan and navigate through a multi-level drawing and maintain the most precise fit, every time. (video: 1:43 min.) Rotation Assistance: Navigate and pan multi-faced objects with up to 180° rotation at any time, without a design crash. (video: 1:58 min.) Vectorizing: Get straight edges. When you edit a line or polyline, you can now see how far each edit changes your vector path. (video: 2:05 min.) Revit Support: Import revisions to your drawing from Revit. Start over or revert back to previous versions and generate new layers, instantly. (video: 1:36 min.) Version Control: Track and compare changes you make to your drawing as you work. Display previous versions of your drawing as a history or read-only copy of your current drawing. (video: 1:32 min.) Viewfinder and Render Target: Create a preview of your designs in the same window as your drawing. When you're ready to render your view, you can preview it as a PDF or surface-to-image raster. (video: 1:54 min.) Drawing Limit Improvements: A new drawing limit option ensures you can open as many drawings as your memory allows. (video: 1:23 min.) Design Limit Improvements: Sharpen your way through more drawings. A new design limit option ensures you can open as many drawings as your memory allows. (video: 1:23 min.) Keyboard and Pointer Support: Draw, navigate, and annotate drawings with new, faster, smarter, and more keyboard-friendly commands. (video: 1:48 min.) Planar Editing:
