PhotoPaint _PhotoPaint_ is a photo-editing program designed for beginners that works like the suite of programs known as PaintShop Pro. PhotoPaint can be downloaded free from the Adobe website (www.adobe.com). For more information, see the coupon in the sidebar in this chapter. ## Getting Images to Start Your Editing Unlike photo-editing programs such as Photoshop, where you start with a blank canvas and apply layers of edits, you can start PhotoPaint with a picture. Figure 2-2 shows an example. FIGURE 2-2: This picture is the original photograph. To open an image in PhotoPaint, double-click its icon. You see a slide show of thumbnails that represent the image's different layers, as shown in Figure 2-3. FIGURE 2-3: Double-click to open a file in PhotoPaint. By default, the thumbnail image represents the image before you're done with PhotoPaint. But if you click the Image icon, shown in Figure 2-4, you can click the layers to bring up the original photo. FIGURE 2-4: Click the Image icon to switch to the original photo. PhotoPaint's layers appear in groups called palettes. This feature is most likely to be of use to advanced users. You can click the palettes to reveal or hide the different layers. That way, you can create a new layer, bring up a different palette, and edit the layer in one step rather than one subroutine at a time. Unfortunately, that option isn't available for beginners; they're limited to working on the image's original layers. ## Pulling out or zooming into the image To zoom in or out on an image, you must click the Zoom icon (the arrow in the upper-right corner of Figure 2-5) and then use the Zoom slider to magnify or shrink the image. You can also use the Zoom slider to toggle the image between the original and a larger or smaller version of it. For an overview, click the Zoom icon and select an option. Figure 2-5 shows the two options: Zoom In and Zoom Out. The Zoom In option in the figure increases the image's view by 50 percent, and the Zoom Out option zooms out by 50

The present invention relates to a new and distinct cultivar of *Osteospermum* plant botanically known as *Osteospermum ecklonis* and hereinafter referred to by the cultivar name 'Balsomin'. The new cultivar is the product of a planned breeding program conducted by the inventor in Enkhuizen, Netherlands. The breeding program commenced in 2001. The objective of the breeding program is to develop *Osteospermum* cultivars with compact growth habit and numerous small dark-colored flowers. The new *Osteospermum* cultivar is the product of a cross-pollination made by the inventor in Enkhuizen, Netherlands of the proprietary female *Osteospermum ecklonis* breeding selection designated '02-0032-1', not patented, as the male or pollen parent. The cultivar 'Balsomin' was discovered and selected by the inventor as a single flowering plant within the progeny of the stated cross-pollination in a controlled environment in Enkhuizen, Netherlands in 2002. Asexual reproduction of the new cultivar by terminal stem cuttings since 2003 in Enkhuizen, Netherlands, has demonstrated that the new cultivar reproduces true to type with all of the characteristics, as herein described, firmly fixed and retained through successive generations of such asexual propagation. The US-based company is reported to have reached a deal to take on the carhoys (the horse-drawn carts that transport goods at that period) in a five-year pilot project to reduce traffic congestion and provide a cleaner and greener alternative to cabs and car services. The project can provide 1,000 jobs for drivers who will operate the so-
